FUNDING REQUEST FOR:

BIOMASS TRANSFORMATION OF RICE STRAW

We are currently looking for grants, investors, and/or partners to fund environmentally sound rice straw and recycled plastic processing facilities. These facilities will produce recycled beads that can be used by the plastic's industry to create superior products normally made of wood and/or plastic at a much lower cost and reduce the need for cutting down-trees.

Each facility will create over a hundred new direct jobs, plus many new job opportunities for its local area by expanding existing plants and opening new plants that use the material to produce products. In place of burning the rice straw, it will also create a market for the local farmer's rice straw and increase their annual gross monetary yield substantially. Each facility will process about 100,000 tons of rice straw annually which equates to about 25,000 acres per facility. Rice being the worlds second largest staple and with over 378,000,000 acres of rice grown worldwide annually, there is a large market for future growth.

If you are interested in funding one of these facilities, please review the attached website so that you might better understand the proposal: <http://rs.etna-usa.com>
